

ORACLE ERP EnterpriseOne
Xe,8.0, 8.10, 8.11, 8.12 and more

What We Could Do For You!

We can Architect and maintain the JDE infrastructure resolving JDE, Network and Databases outages as well as tuning its performance..

Provide maintenance to: Data Sources, OCM, Queues, Subsystems, recover lost or damaged objects, setup activity rules, client installs, JAS, Citrix and TS installs, package builds, menu and security maintenance, setup Tasks and Relationships, UBE and Interactive applications error tracking and resolution, System Performance and slowness issue as well as wrong configuration and system setup.

We specialize in cleaning up implementations, installation, upgrade, update, performance tuning, security and network infrastructure of the system. Our consultants have the skill, industry knowledge, and experience to work directly with you and assist you in accomplishing your objectives in the shortest, most efficient time frame possible.

We offer very competitive rates.

- Implementing New Functionality
- Complex CNC Issues and support
- Managed CNC Services
- System Stress Testing
- Strategic Planning / Software Selection
- Performance Tuning
- Any many more

We will do our best to do it for you!

Regardless if you are running J.D Edwards OneWorld, or EnterpriseOne 8.12 we can assist you in meeting your objectives. With an average of 12 years of JDE CNC experience and 20 years of industry experience our resources can **protect you from the expensive pitfalls less experienced and "cheaper" consultants tend to overlook.**

We can deliver unsurpassed quality and customer service along with a complete "Enterprise Management Solution" at a **total monthly cost**, well below those of the major J.D. Edwards™ / PeopleSoft / Oracle consulting providers.

Each member of our team knows firsthand why JDE implementations succeed, and why they fail. Whether your company is in the first phases of implementation or if you have been live for years, ACE will help you squeeze every dime from your investment.

Extremely Reliable J.D. Edwards / PeopleSoft CNC resources will manage your Implementation 100% remotely for a Flat Monthly Fee.

CNC, Outsourcing, JDEdwards, PeopleSoft, Oracle CNC Errors, performance problems, managed services, Websphere, Citrix, AS/400 iSeries, Sun Solaris-Oracle, Windows NTSQL, thin client, fat client, object management, OMW, ERP, ESU, JAS, OneWorld, OMW, Package Management, Package, Performance Tuning, SQL, Oracle, Unix, implementation, ASU, Audits, Performance Tuning, High Availability, etc.

NEVER WORRY ABOUT CNC ISSUES AGAIN!!

Get the Industry's most experienced CNC consultants to Proactively Monitor & Support your OneWorld / EnterpriseOne Architecture for a flat monthly fee!

When you call or email us you're not calling or emailing 'Response Line' rookies. All Service Levels include a **Single Primary Contact** and a backup **Secondary Contact** so when you contact us you are communicating directly to your dedicated support person!

We'll even attend your staff meetings by phone and send you Weekly Progress / Status Reports complete with prioritized findings, recommendations and suggestions!

We provide remote OneWorld / EnterpriseOne CNC / Technical support that will cover your Day to Day OneWorld administration to ensure a Stable, a Well Performing System.

Hiring full time, on-site staff is expensive, and it is not fool proof. You spend a lot of time, energy and money put into finding just the right person and then you never know just how long they will stay. In addition you have still have to pay for:

Salary, Administration costs, Bonuses, Vacation Days / Holidays, Benefits, Sick Days/ Personal Days, Training on JDEdwards Equipment and Databases plus more...

Taking into account a 2 year + average learning curve to truly become an 'experienced' CNC resource, you may still end up dealing with a lot of lost productivity across your enterprise during their learning curve.

There are 3 service levels available with terms ranging from 6 months to 5 years. All Service Levels include Basic EnterpriseOne System Monitoring which is a 24x7x 365, automated, email enabled, notification service that requires a Client side Network Email Account. When a threshold set by you and your support person is breached, your dedicated support contacts immediately notified by Email. They will either correct the problem or make recommendations and outline your options to help you determine the next steps or we could fix the problem remotely based on your level of support and requirements..
